CO2 and CO4 Evaluation Finished Project Report Fall 2019-2020

Project Title: Online Polling System (Visiting Area in Bangladesh)
Section: H

Student Name	Student Id
KAWSAR MAHMUD	18-36487-1
NILA SULTANA	18-36512-1
SYED NAFIUL SHEFAT	18-36538-1
NYME AHMED	18-36105-1

Online Polling System (Visiting Area in Bangladesh)

Project Description:

Introduction:

The beautiful country of Bangladesh has tourist attractions including archaeological sites, historical mosques and monuments, rivers, tea gardens, beaches, forests, tribal people and wildlife of various species. Along with rich cultural heritage, it leaves an unforgettable impression on the mind of any visitor. This site is made for enlighten the inner beauties of Bangladesh tourist spot.

Users Category Description:

There are 2 types of users in this system. They are User type (voter) and Admin type.

Users have to login for voting. For login, user must give his username and password. If username and password filed are empty and press log in button, a message will pop up to fill up the field. Even one of field is empty messages will show. When you enter username there will show some suggestions. If user name is wrong then it will show user not exists and if password wrong then it will show password wrong. There is a checkbox to show password. When you log in, if user name and password correct and then your user ID will be checked that you are an Admin or User, then take you to that page.

If user doesn't have any account, then there is signup section for users. There are two signup options for this system. One for User Signup and another is Admin Signup. For User Signup, user have to give his first name, last name, user name, email, age, gender, phone number and password for registration. There is a suggestion box for username. User have to match his password, give the valid email address and age is 18 or above. For Admin Signup, you have to give a permission code. Because anyone can sign up as an admin in this system. So if permission code is matched, then you can sign up as an admin. So it is used for site security. Here you have to give name, username, email, phone and password for admin registration. Here is also have the suggestion box for username and password matching options.

After login successfully, User can see his information and update his information from homepage. To update information user have to give valid username, email, phone number, age, address and password. Valid information means user have to give name which length is more than 5 character, give @ symbol in email and the length should be more than 5, give exactly 11 digits for phone number, valid age from 18 to 100 for age, insert more than 3 characters for address, give more than a characters for password. Otherwise his information will not be updated. In address there will be some suggestion to help the user to give valid address. When the user update email and password he have to login again. From homepage user can give vote to their favorite places, see the total result of the polling, see the instruction for the homepage, contact with the developer and also give feedback. When user give feedback he have to give valid username, valid phone number and valid feedback. If user click on the social media logo he will get those social media site.

For admin site, you have to give the admin email and password for admin homepage. If email or password doesn't match, a pop up window will come with incorrect email/password message. In admin homepage, admin can see the instructions by using JSON, view his profile, update his profile, view others admin, add admin, delete admin, view users and see overall votes. For updating, admin can update his name, username, number and password. There will be a suggestion box by using Ajax for updating his name and username. For updating any information, admin have to give his password and match it. For adding an admin, admin have to give new admins' email, password and his password for security purpose. There will appear a popup window for doing any kind of add admin operation. After adding an admin, he can see that the new admin in view admins section without refreshing the page by using Ajax. For deleting an admin, admin have to know the username of other admins and have to match his password. In overall votes, admin can see both total votes and the individual vote gives by the users.

Online Polling System (Visiting Area in Bangladesh)

Project Folder Structure:

In WT Project [Group G] zip file, there are 3 folders. They are Admin, Homepage and Signup & Login. For login, you have to go to the Signup & Login folder and run index.php file. There are also 4 folders in Signup & Login folder. They are css, include, project webtech, repo. In index.php file, there is a database connection link which is in include folder named as db_connect.inc.php. If login successful in index.php page as admin, then it goes to admin.php file and as user, it goes to user.php file which are in repo folder. In admin.php and user.php files, there is a logout link connected to logout.php file which is also in repo folder as well. In login page, there is a suggestion box which is done by Ajax. For suggestion box, index.php file is linked with gethint.php file which is in repo folder. For css, index.php file is connected with login.css file which is in css folder.

For signup, index.php is linked with permission.php file for Admin Signup and sign.php file for User Signup. In permission.php file, it is connected to adminsign.php if permission code is matched and index.php file is connected if you want to go back from permission.php page. CSS of permission.php is linked with per.css file. In adminsign.php, there is a suggestion box which is done by Ajax and linked with gethint.php file which is in repo folder. This adminsign.php is also linked with index.php file if you go back from adminsign.php page. CSS of adminsign.php is linked with adminsign.css file. In sign.php file, there is also a suggestion box and it is linked with gethint.php file which is in repo folder. The sign.php is also linked with index.php file if you go back from sign.php page. CSS of sign.php is linked with sign.css file. After successful signup in sign.php page, it goes to usersuccess.php and show the user given information in the signup page. The usersuccess.php file is linked with index.php if you want to go to the login page. CSS of usersuccess.php is linked with usersuccess.css file.

For seeing the user homepage after login, you have to go Homepage folder and run homepage1.php. In homepage1.php, it is linked with sucess.php if you give any vote. In sucess.php file, it is linked with sucess.css file for CSS. For CSS in homepage1.php file, it is connected with bootstrap.min.css file which is in css folder and homepage.css. The homepage1.php file is linked with login.php if user want to logout. The display.php file is linked with homepage1.php if user wants to display his information and update.php file is linked with homepage1.php if user wants to update his profile. For CSS, display.css is linked with display.php and update.css is linked with update.php. In both file, they are connected with homepage1.php if user wants to go back. The result.php file is connected with homepage1.php file if you want to see the polling result. CSS of result.php is linked with result.css file. The feedback.php file is also connected with homepage1.php. For CSS, feedback.css is linked with feedback.php file. And also feedback.js file is linked with feedback.php file. In homepage1.php file, JSON is used and linked with instruction.json file for show the instruction.

For showing the admin homepage, you must go to the Admin folder and run adminhome.php file. In adminhome.php file, JSON is used and connected with help.json file. For deleting an admin, adminhome.php is linked with deleteAdmin.php file. In deleteAdmin.php file, adminhome.php is linked if you want to go back. The upAdminName.php, upAdminUname.php, upAdminNum.php, upAdminPass.php files are connected with adminhome.php for updating admin name, username, number and password respectively. In upAdminName.php and upAdminUname.php file, there is a suggestion box for name by using Ajax, which is linked with adminhint.php file. After updating admin name, username, number, password from different php file, they will go to the adminhome.php file. Here is again used Ajax and connected to viewadmins.php with adminhome.php for seeing the admin from adminhome.php without refreshing the page. For logout, adminhome.php file is connected with login.php file.

Online Polling System (Visiting Area in Bangladesh)

Core Modules of the Project:

index.php(for Login)

```
<?php
include "includes/db_connect.inc.php";
session_start();
$uPass = $uName = $message = $usertype = "";
$u_name_err = $pass_err = "";
if($_SERVER["REQUEST_METHOD"] == "POST"){
    if(empty($_POST['u_name'])){
        $u_name_err = "Username cannot be empty!";
    }
    else{
        $uName = mysqli_real_escape_string($conn, $_POST['u_name']);
    }
    if(empty($_POST['u_pass'])){
        $pass_err = "Password cannot be empty!";
    }
    else{
        $uPass = mysqli_real_escape_string($conn, $_POST['u_pass']);
    }
    $sqlUserCheck = "SELECT user_id, password,usertype FROM Login WHERE user_id = '$uName'";
    $result = mysqli_query($conn, $sqlUserCheck);
    $rowCount = mysqli_num_rows($result);
    if($rowCount < 1){
        if($uName== "" || $uPass==""){
        }
        else{
            $message = "User does not exist!";
        }
    }
    else{
        while($row = mysqli_fetch_assoc($result)){
            $uPassInDB = $row['password'];
            $utypeInDB = $row['usertype'];
            if($uPass==$uPassInDB && $utypeInDB=="admin"){
                $_SESSION['user_id'] = $user_id ;
                header("Location: repo/admin.php");
            }
            else if($uPass==$uPassInDB && $utypeInDB=="user"){
                $_SESSION['user_id'] = $user_id ;
                header("Location: repo/user.php");
